***Election/Restrictions***

This Office Action is in response to the preliminary amendment filed on 6 July 2004. Claims 6-35 have been added. Claims 1-35 are pending.

***Sequence Election***

Restriction is required under 35 U.S.C. §121:

One sequence with one SEQ ID NO must be elected.

The inventions are distinct, each from the other, because of the following reasons:

Although there are no provisions under the section for "Relationship of Inventions" in M.P.E.P. §806.05 for inventive groups that are directed to different sequences, restriction is deemed proper because these products constitute patentably distinct inventions. Each of the SEQ ID NO's is a unique and separately patentable sequence, requiring a unique search for the prior art. Searching all of the sequences in a single patent application would constitute an undue search burden on the examiner and the USPTO's resources because of the non-coextensive nature of these searches.

Further, Inventions of different SEQ ID NO's are unrelated. Inventions are unrelated if it can be shown that they are not disclosed as capable of use together and they have different modes of operation, different functions, or different effects (MPEP § 806.04, MPEP § 808.01). In the instant case the different inventions represent structurally different polypeptides and the polynucleotides encoding them. Therefore,

Art Unit: 1648

where structural identity is required, such as for hybridization or expression, the different sequences have different effects.

### ***Species Election***

This application contains claims directed to the following patentably distinct species from the three genera of the claimed invention:

I. Applicant is required to elect one of the following species for the priming composition:

(a) a DNA plasmid;

(b) a recombinant protein or particle;

II. Applicant is further required to elect one of the following species for the boosting viral vector:

(I) fowlpox vector;

(II) canarypox – ALVAC vector;

III. Should Applicant elect a DNA plasmid priming composition, Applicant is further required to elect one species of the priming vector:

(III) herpes viral vector;

(IV) replicating viral vector;

(V) non-replicating viral vector.

Applicant is required under 35 U.S.C. §121 to elect a single disclosed species for prosecution on the merits to which the claims shall be restricted if no generic claim is finally held to be allowable. Currently, claims 1, 6, 17, 21, and 27 are generic.

Applicant is advised that a reply to this requirement must include an identification of the species that is elected consonant with this requirement, and a listing of all claims readable thereon, including any claims subsequently added. An argument that a claim is allowable or that all claims are generic is considered nonresponsive unless accompanied by an election.

Upon the allowance of a generic claim, applicant will be entitled to consideration of claims to additional species which are written in dependent form or otherwise include all the limitations of an allowed generic claim as provided by 37 CFR 1.141. If claims are added after the election, applicant must indicate which are readable upon the elected species. MPEP §809.02(a).

Should applicant traverse on the ground that the species are not patentably distinct, applicant should submit evidence or identify such evidence now of record showing the species to be obvious variants or clearly admit on the record that this is the case. In either instance, if the examiner finds one of the inventions unpatentable over the prior art, the evidence or admission may be used in a rejection under 35 U.S.C. §103(a) of the other invention.

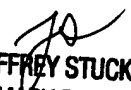

Applicant is reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 CFR 1.48(b) if one or more of the currently named inventors is no longer an inventor of at least one claim remaining in the application. Any amendment of inventorship must be accompanied by a request under 37 CFR 1.48(b) and by the fee required under 37 CFR 1.17(i).
